

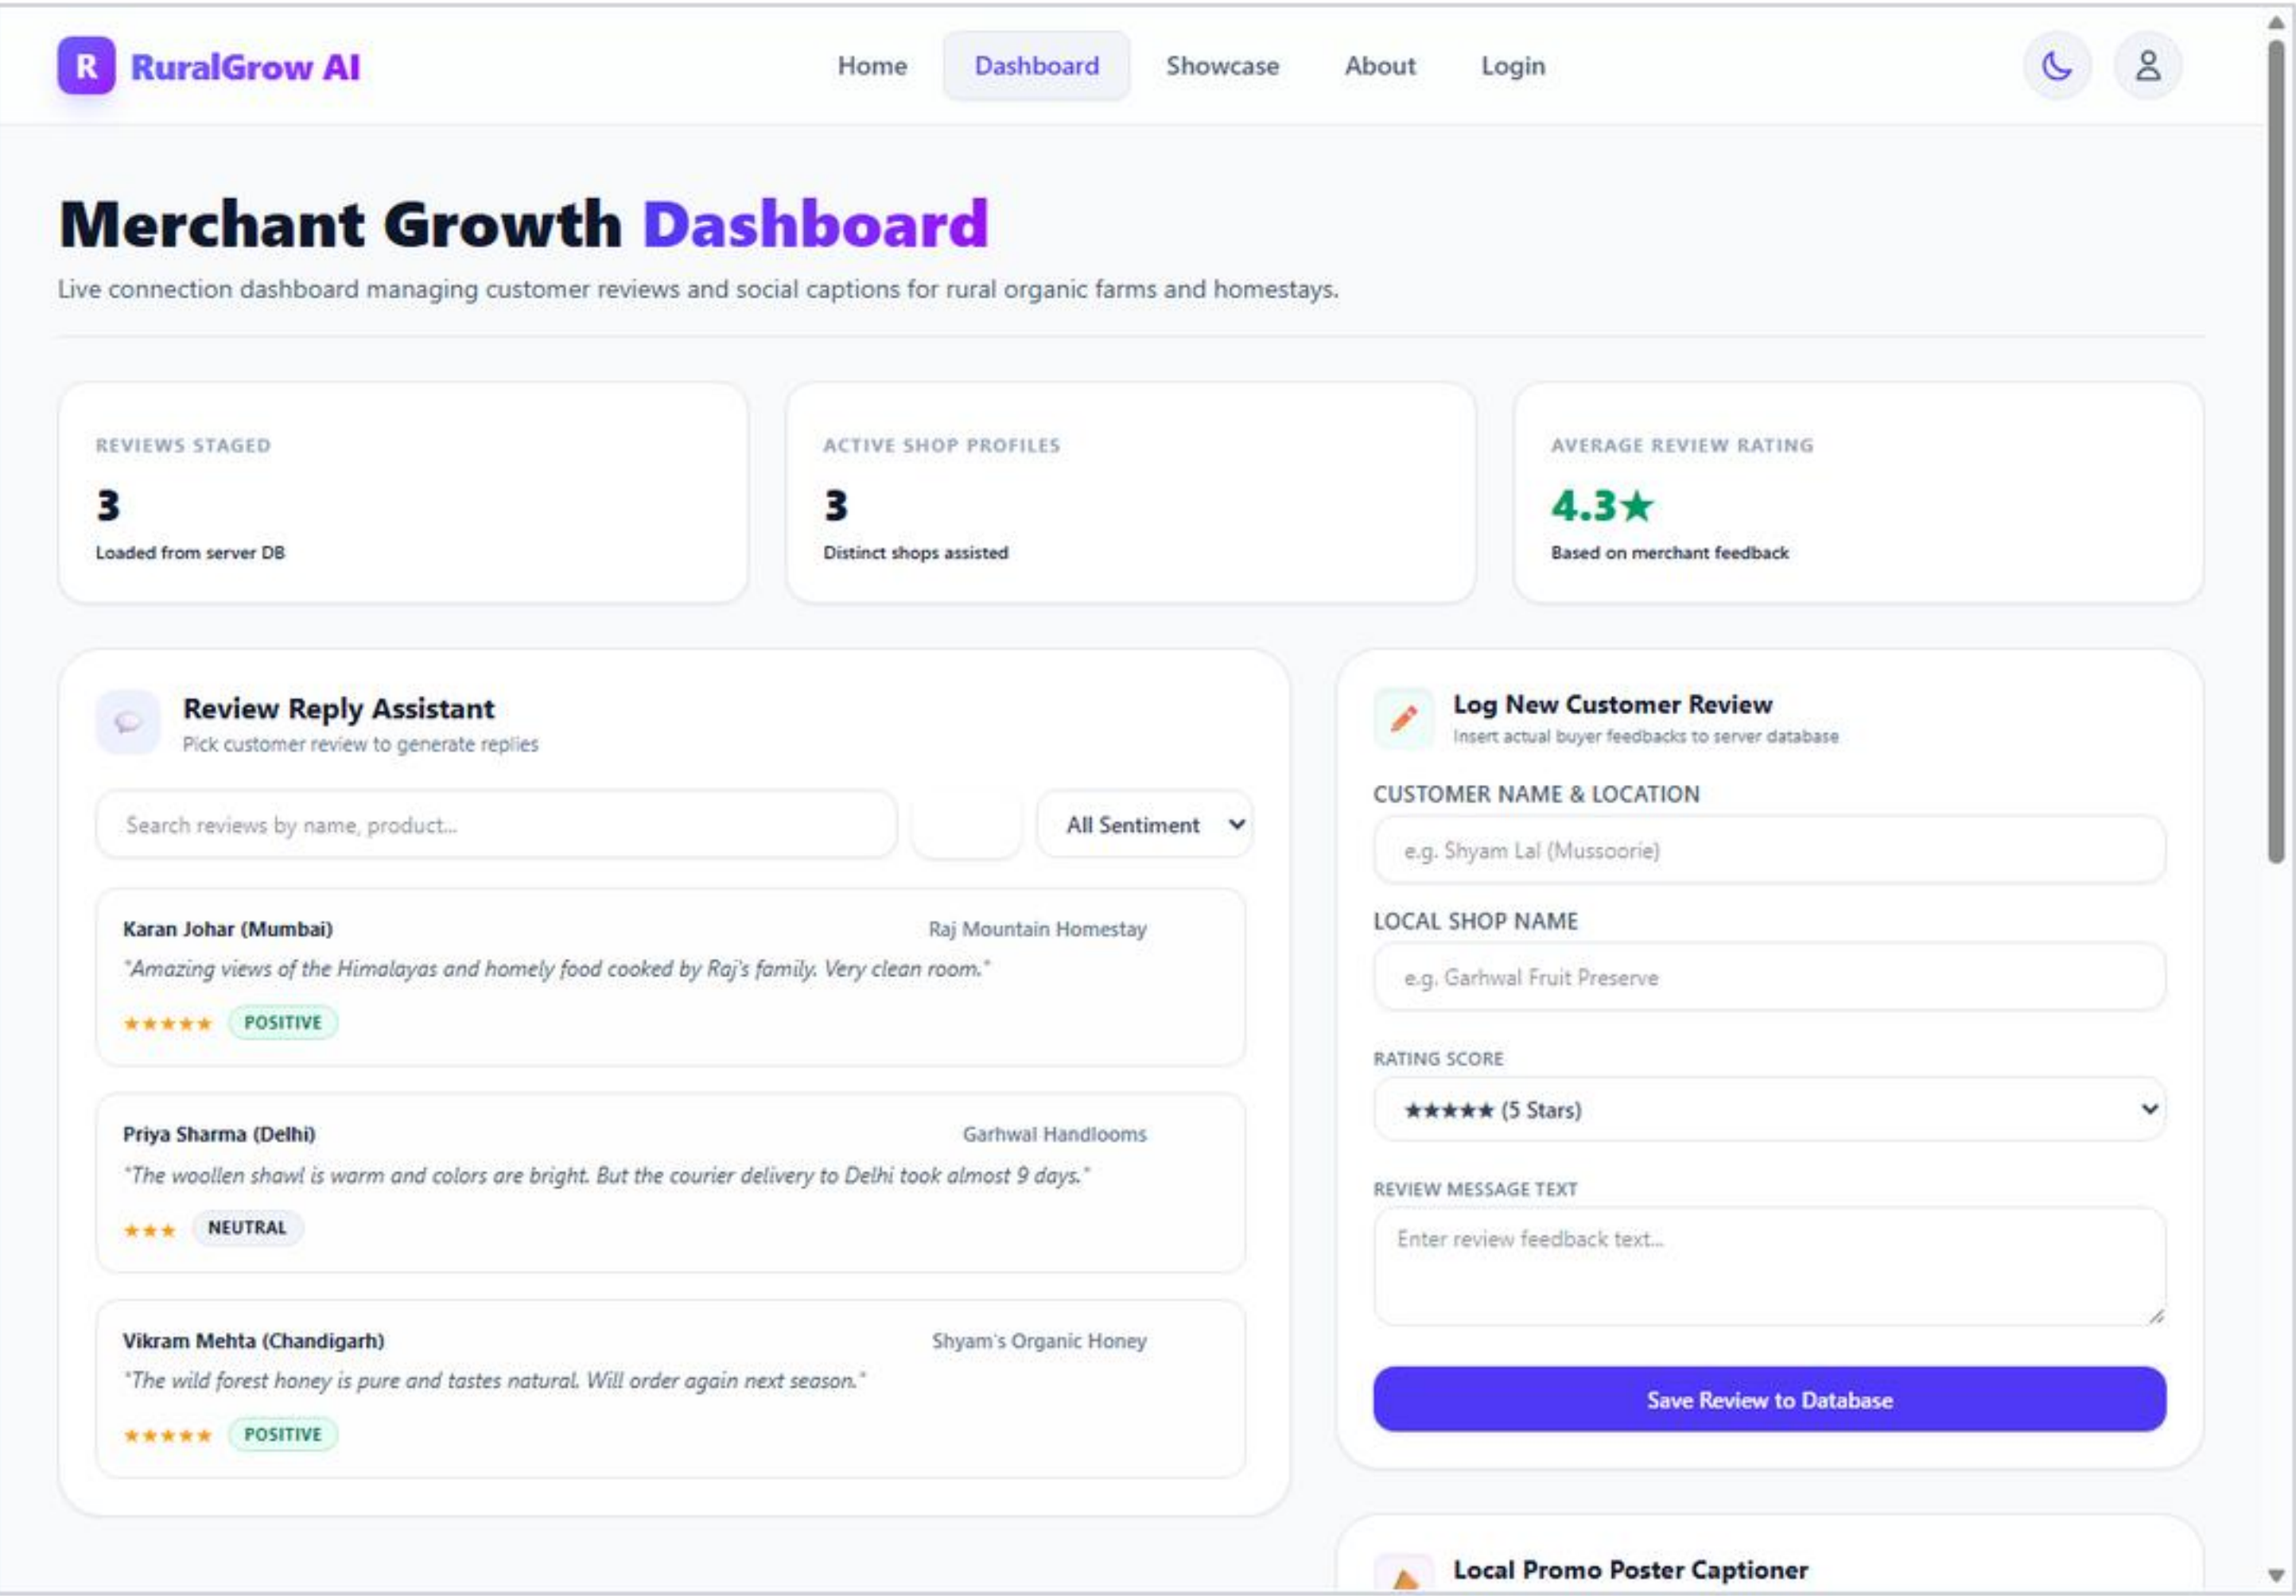

Figure 1: Initial Dashboard Review Logs (READ)

CAPTION NOTE:

This page shows the initial read operation. Upon loading the merchant dashboard, a GET request is sent to /api/reviews to fetch all existing review logs from the persistent MongoDB database. The review cards display ratings, dates, and sentiment analysis tags.

All Sentiment

Saurabh Parihar (Dehradun)

Garhwal Handlooms

"The woollen shawls are of exceptional quality, highly organic material, and very soft. Amazing experience."

★★★★★

POSITIVE

Karan Johar (Mumbai)

Raj Mountain Homestay

"Amazing views of the Himalayas and homely food cooked by Raj's family. Very clean room."

★★★★★

POSITIVE

Priya Sharma (Delhi)

Garhwal Handlooms

"The woollen shawl is warm and colors are bright. But the courier delivery to Delhi took almost 9 days."

★★★

NEUTRAL

Save Review to Database

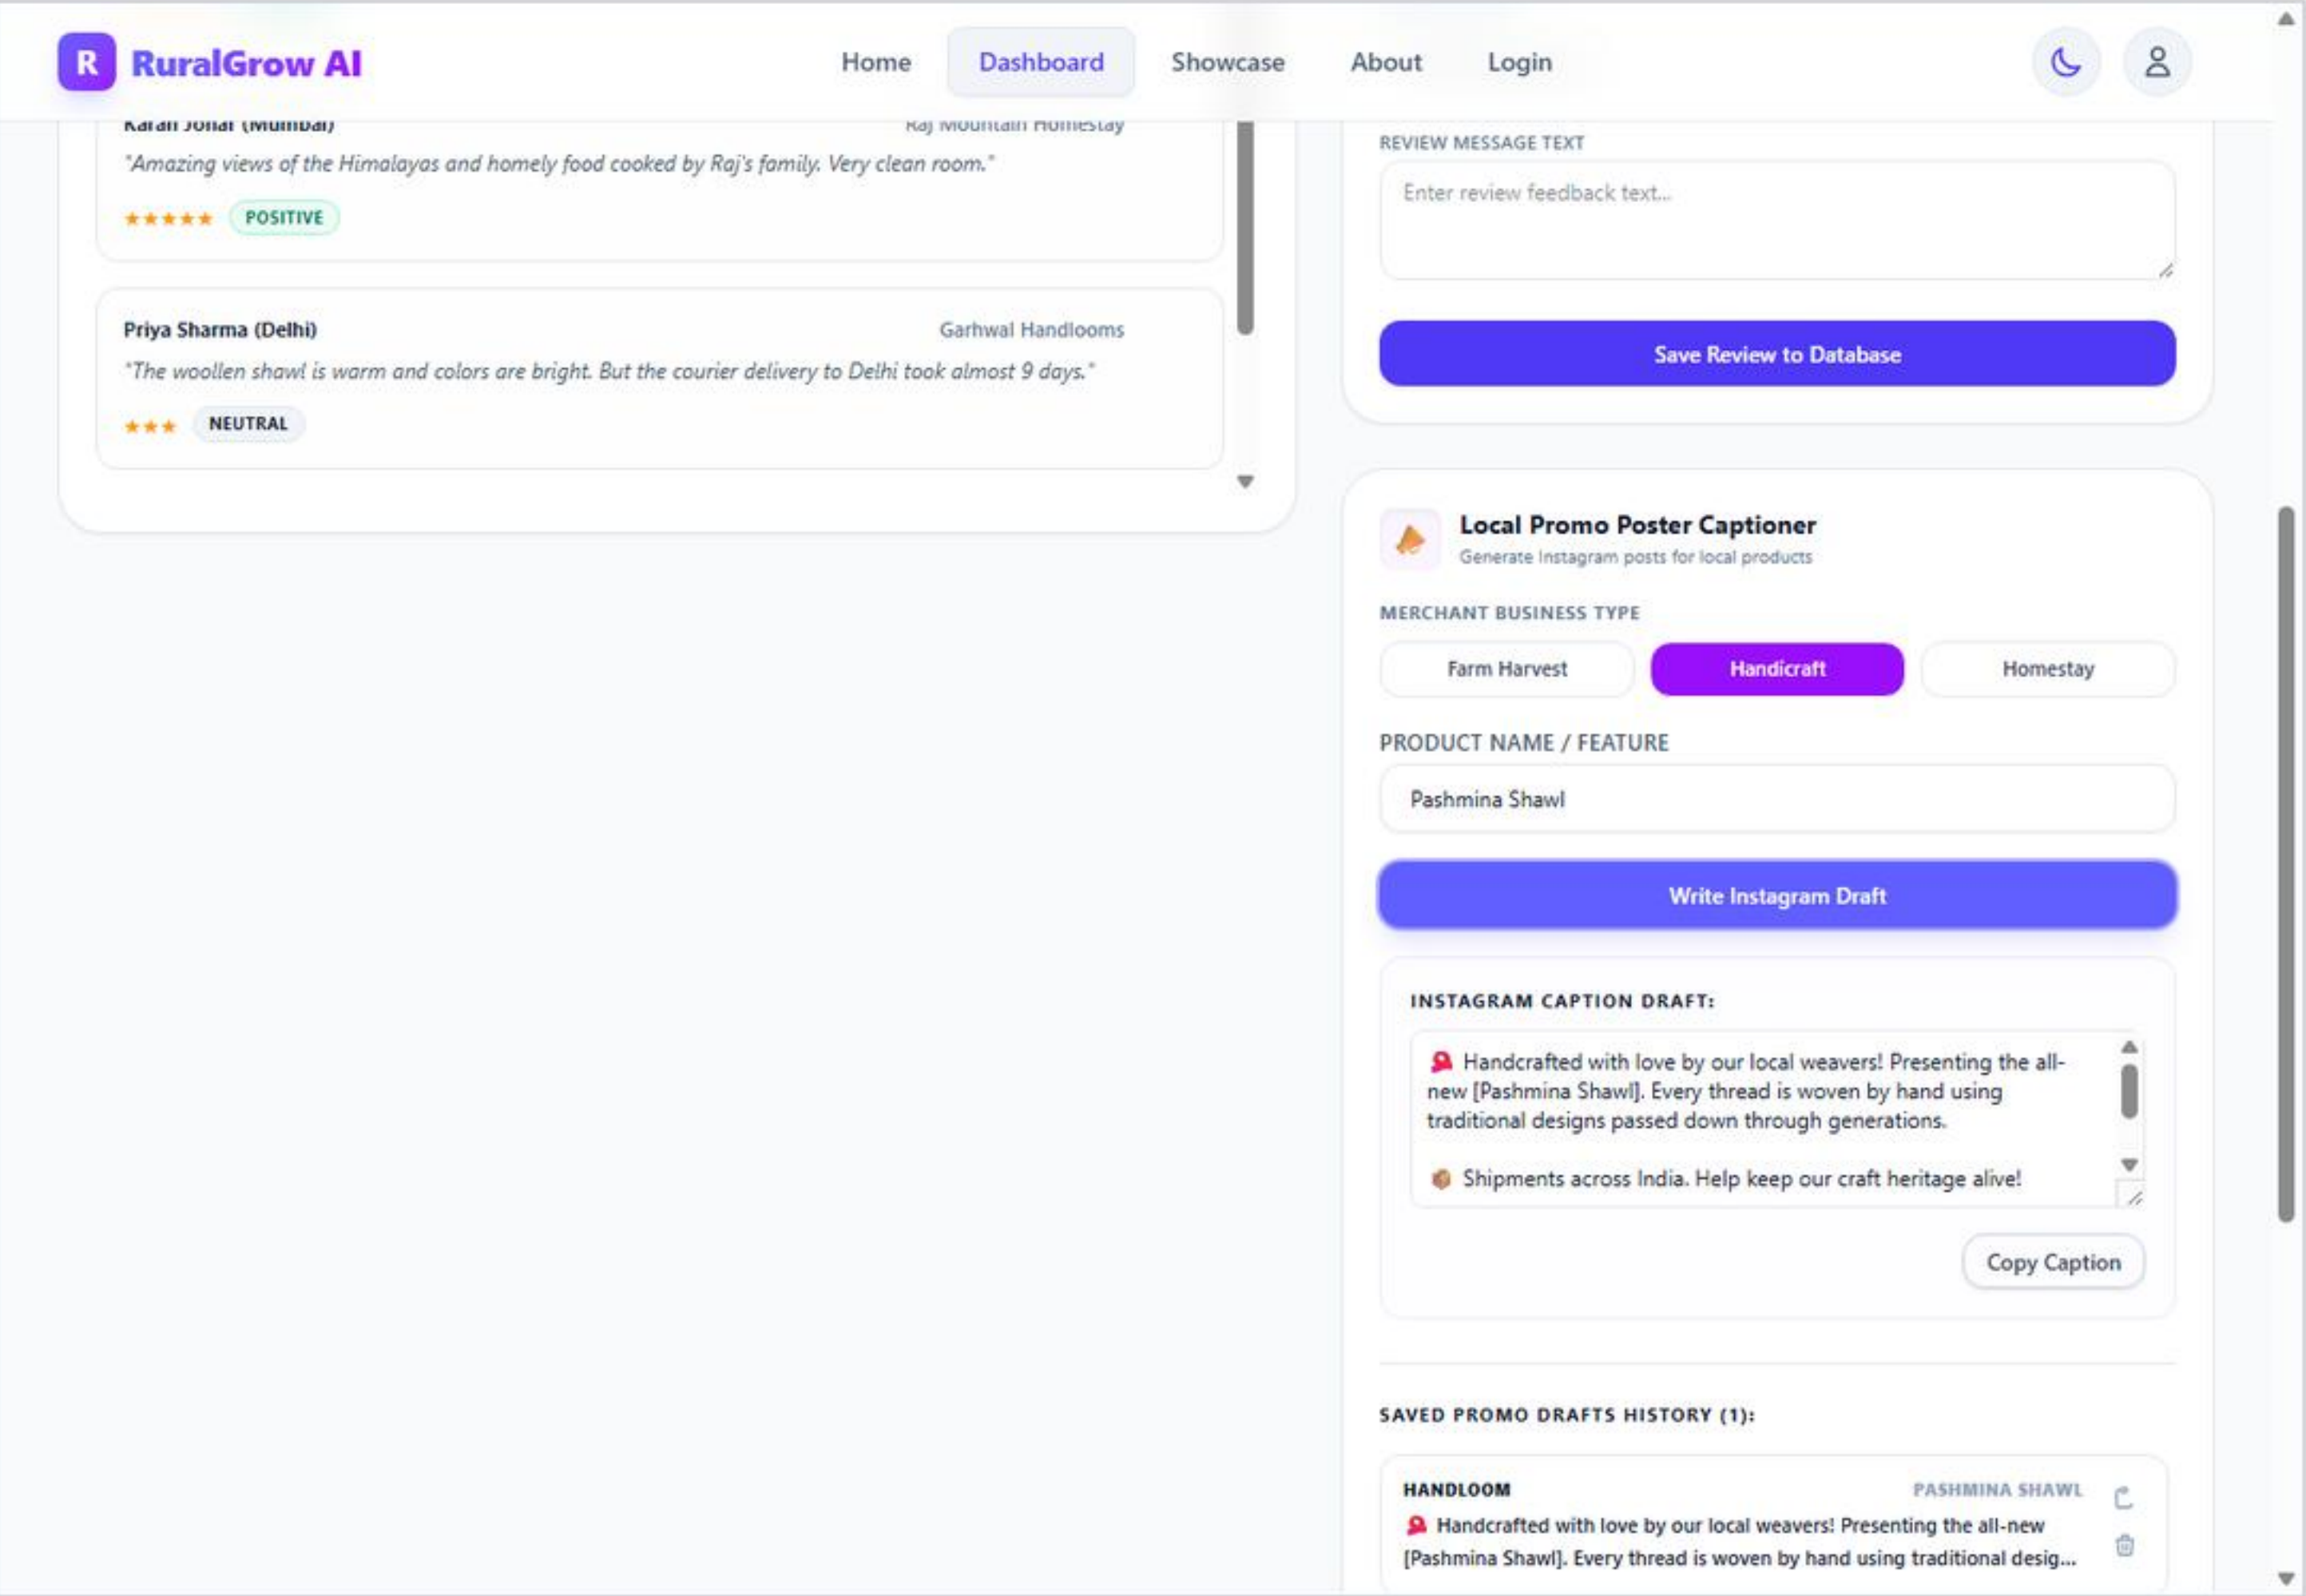

Local Promo Poster Captioner

CAPTION NOTE:

This page shows the review creation workflow. Submitting the merchant review form executes a POST request to /api/reviews, persisting the review metadata into the database collection. The list automatically updates to show the newly added record.

Page of Submission Pack

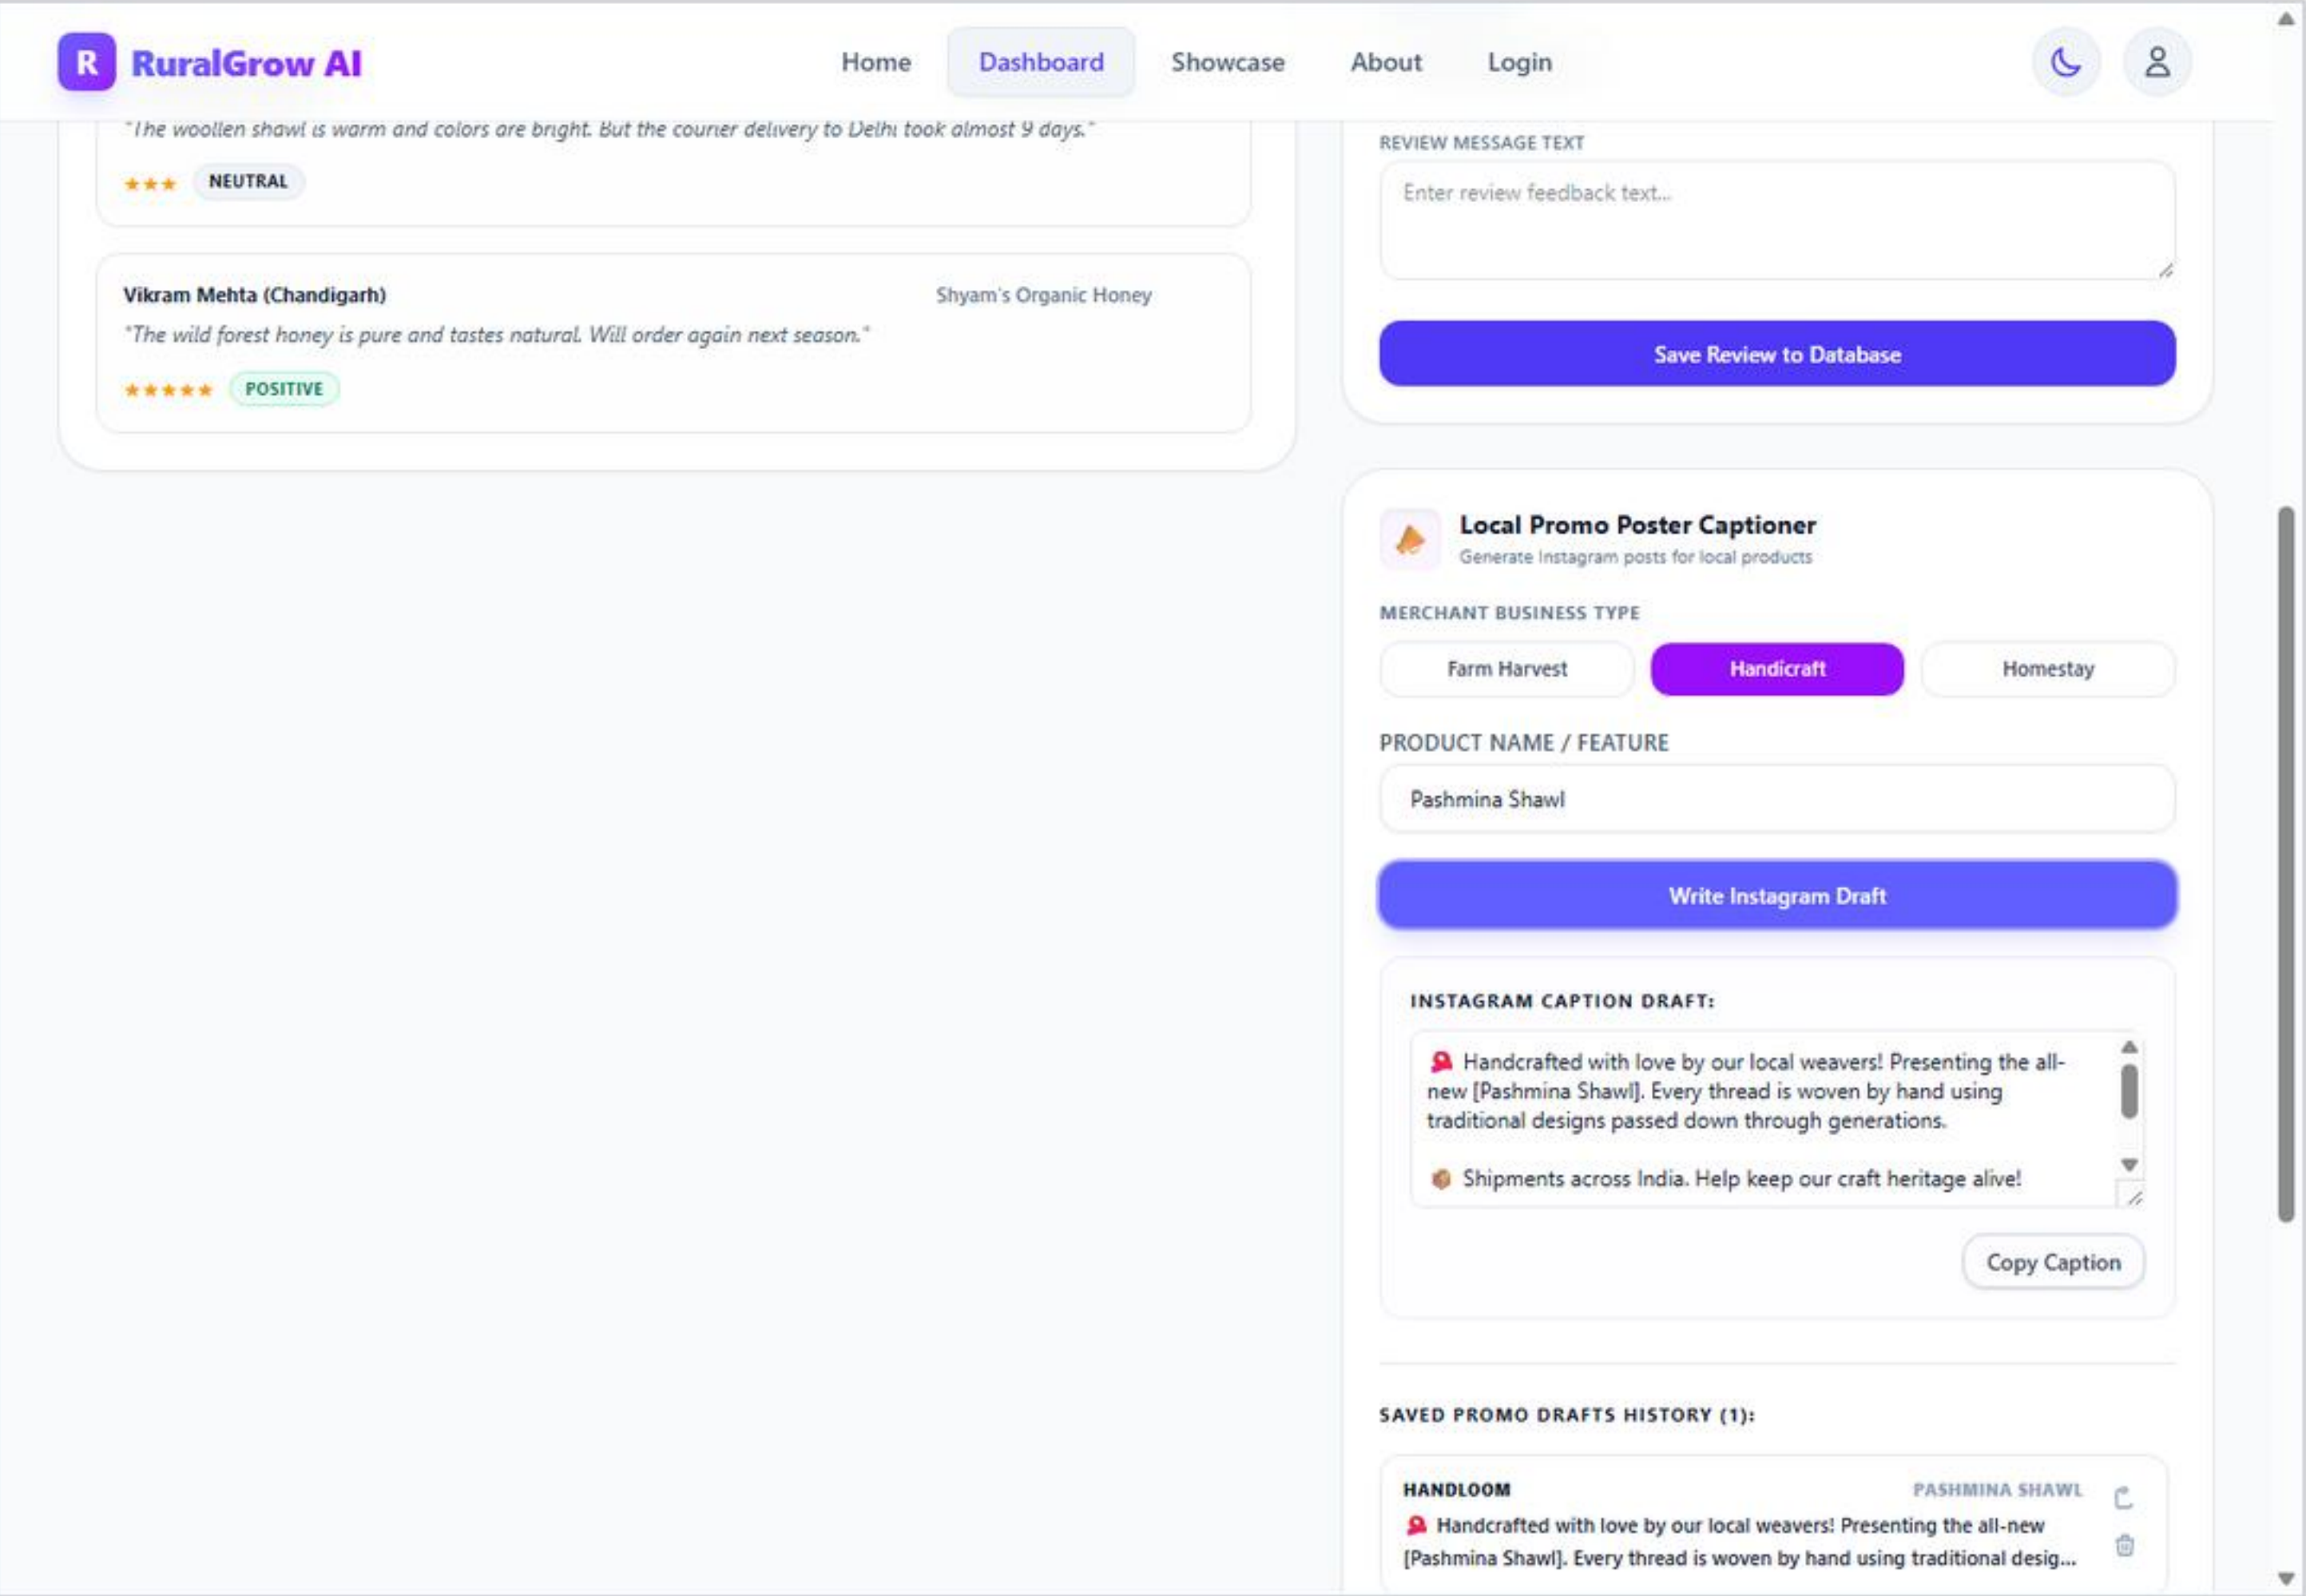

Figure 3: Promotional Caption Persistence (CREATE & READ)

CAPTION NOTE:

This page verifies caption persistence. Generating a marketing post executes a POST request to /api/captions. This persists the promo draft in the database. The saved captions panel fetches and displays historical captions from the DB, ensuring it survives server restarts.

Figure 4: Deleting a Review Record (DELETE)

CAPTION NOTE:

This page displays the review delete operation. Clicking the trash icon triggers a DELETE request to /api/reviews/{id}. This completely removes the document from the MongoDB collection and synchronizes the frontend viewport.
