

1. Authenticated Merchant Telemetry Dashboard

CAPTION NOTE:

Logged-in view showing user-scoped stats, telemetry summaries, and sentiment trend analytics aggregated dynamically from real API requests (GET /api/reviews and GET /api/captions) with JWT authorization.

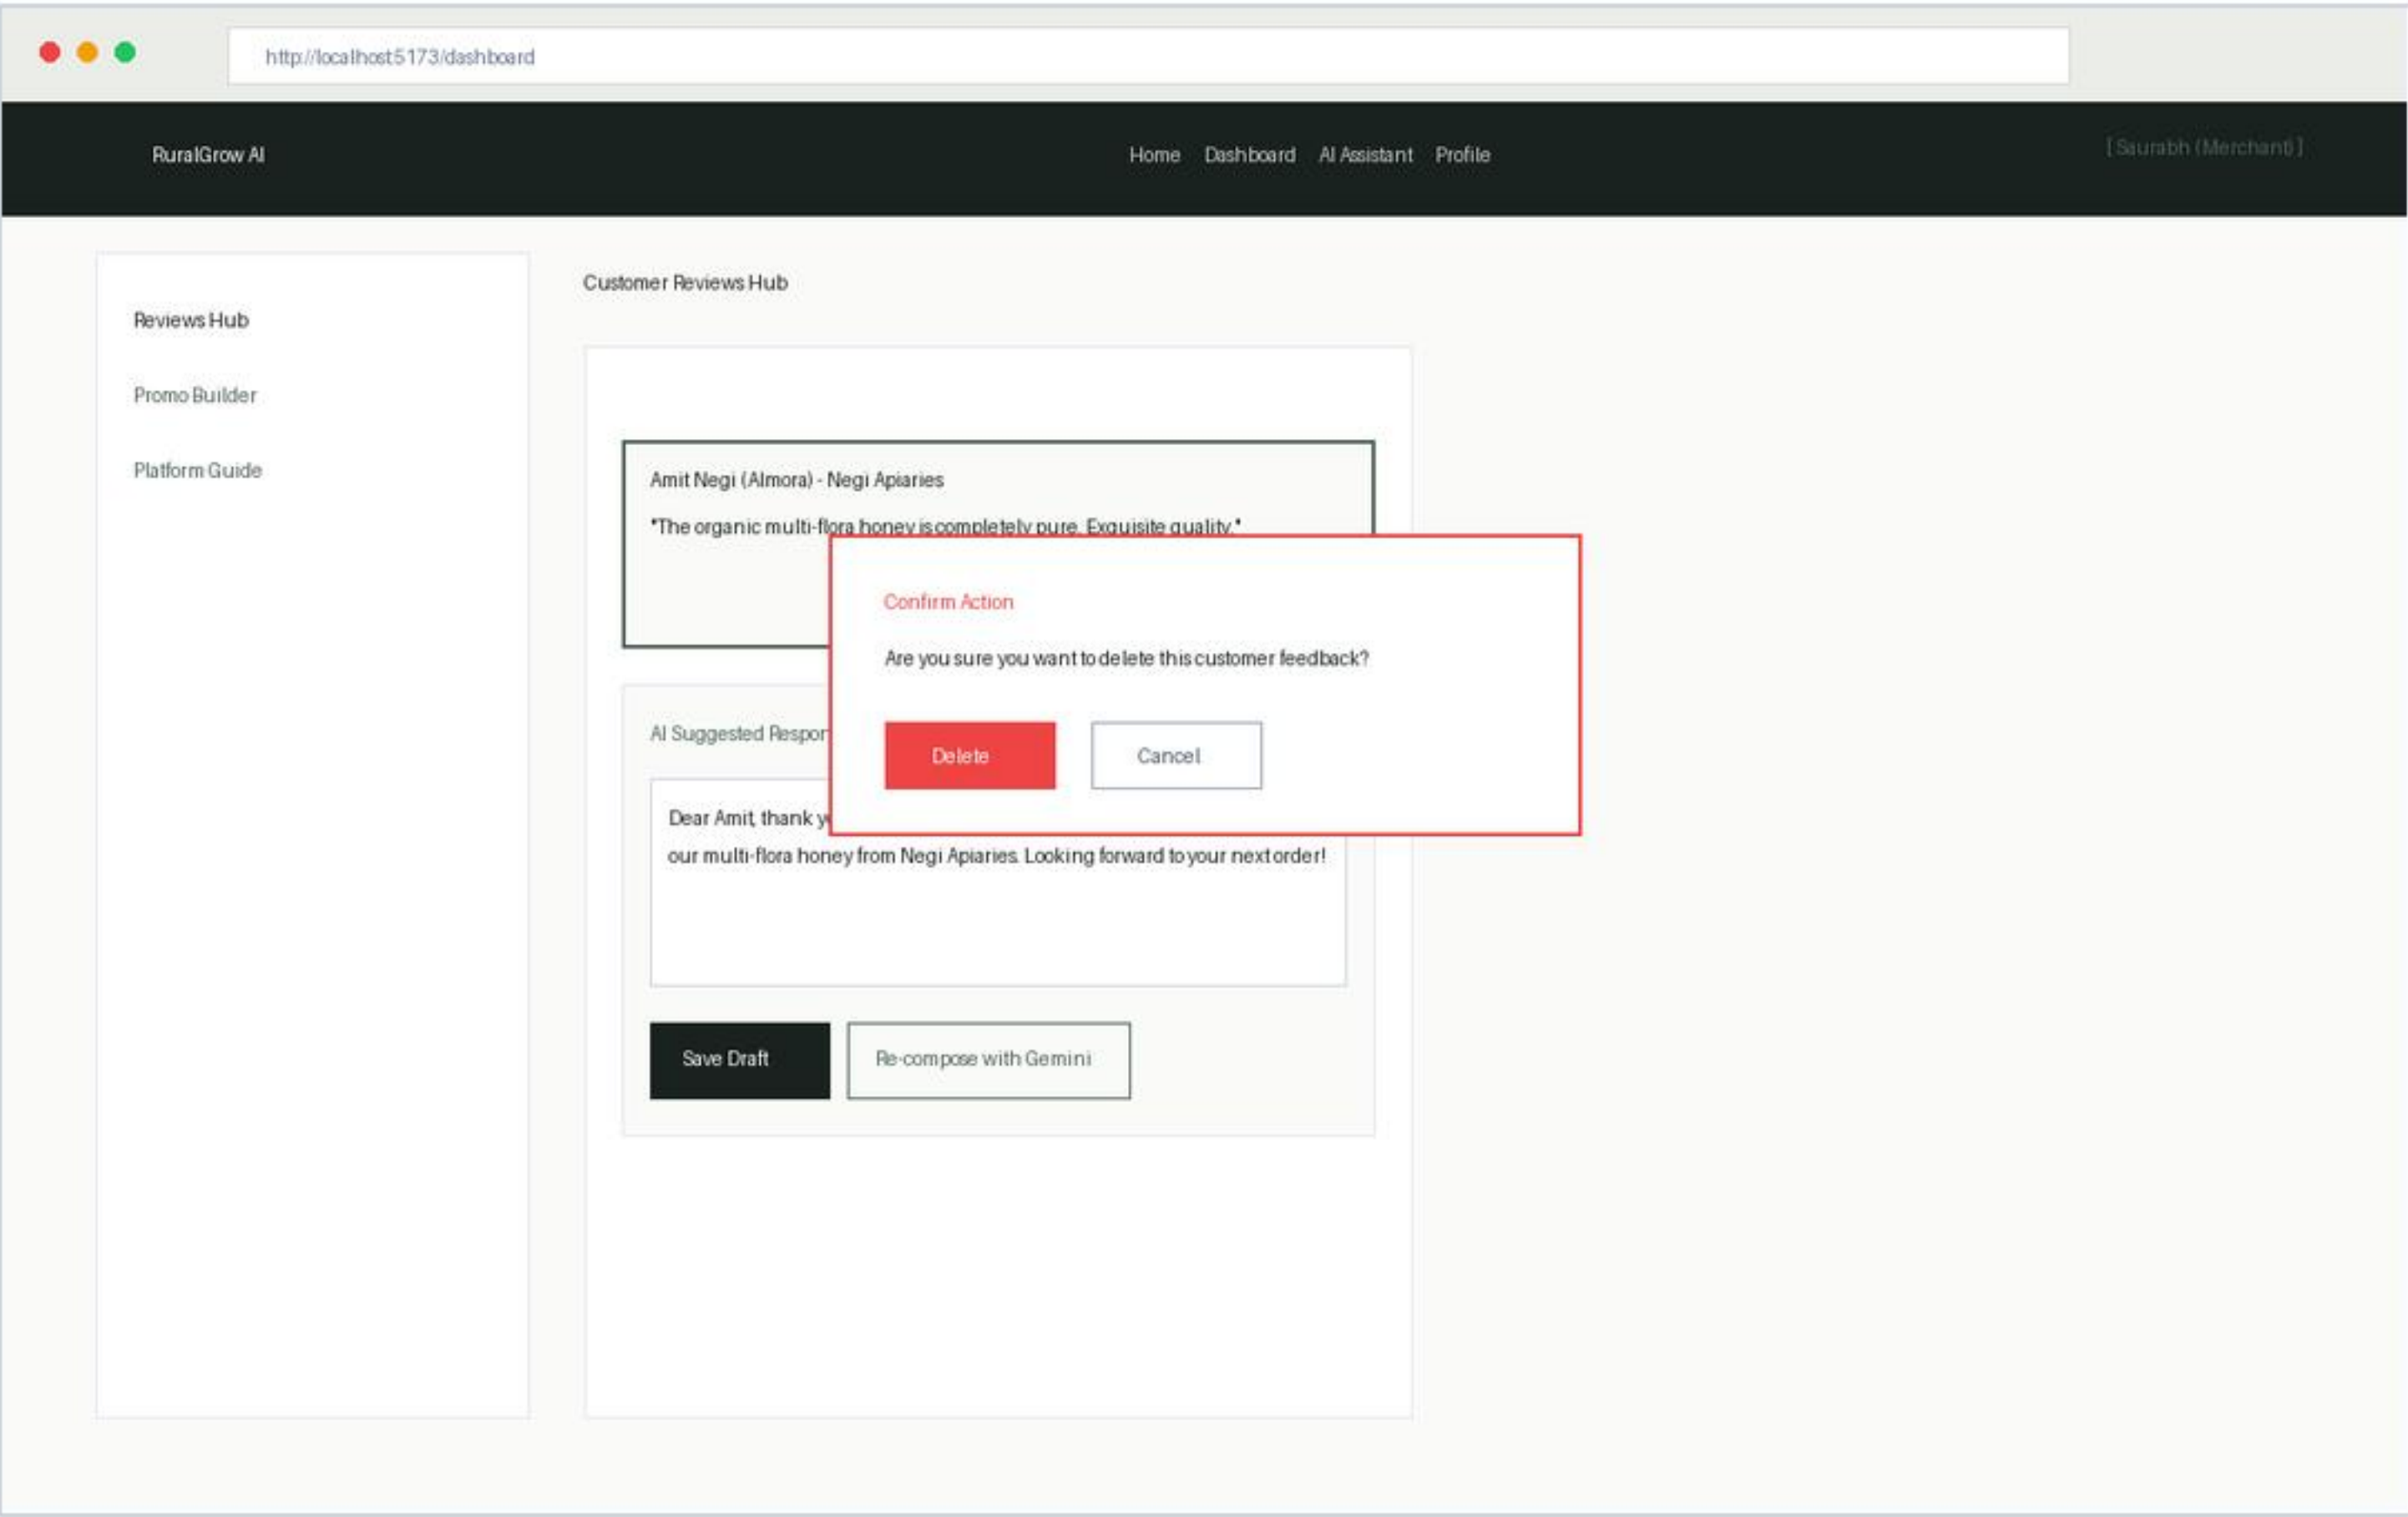

2. Resource Creation Flow (Reviews CRUD)

CAPTION NOTE:

Screen displays the customer review log form. Submitting input validates fields, triggers success toasts, and maps the new record (Amit Negi) directly inside the real-time list view without requiring page reloads.

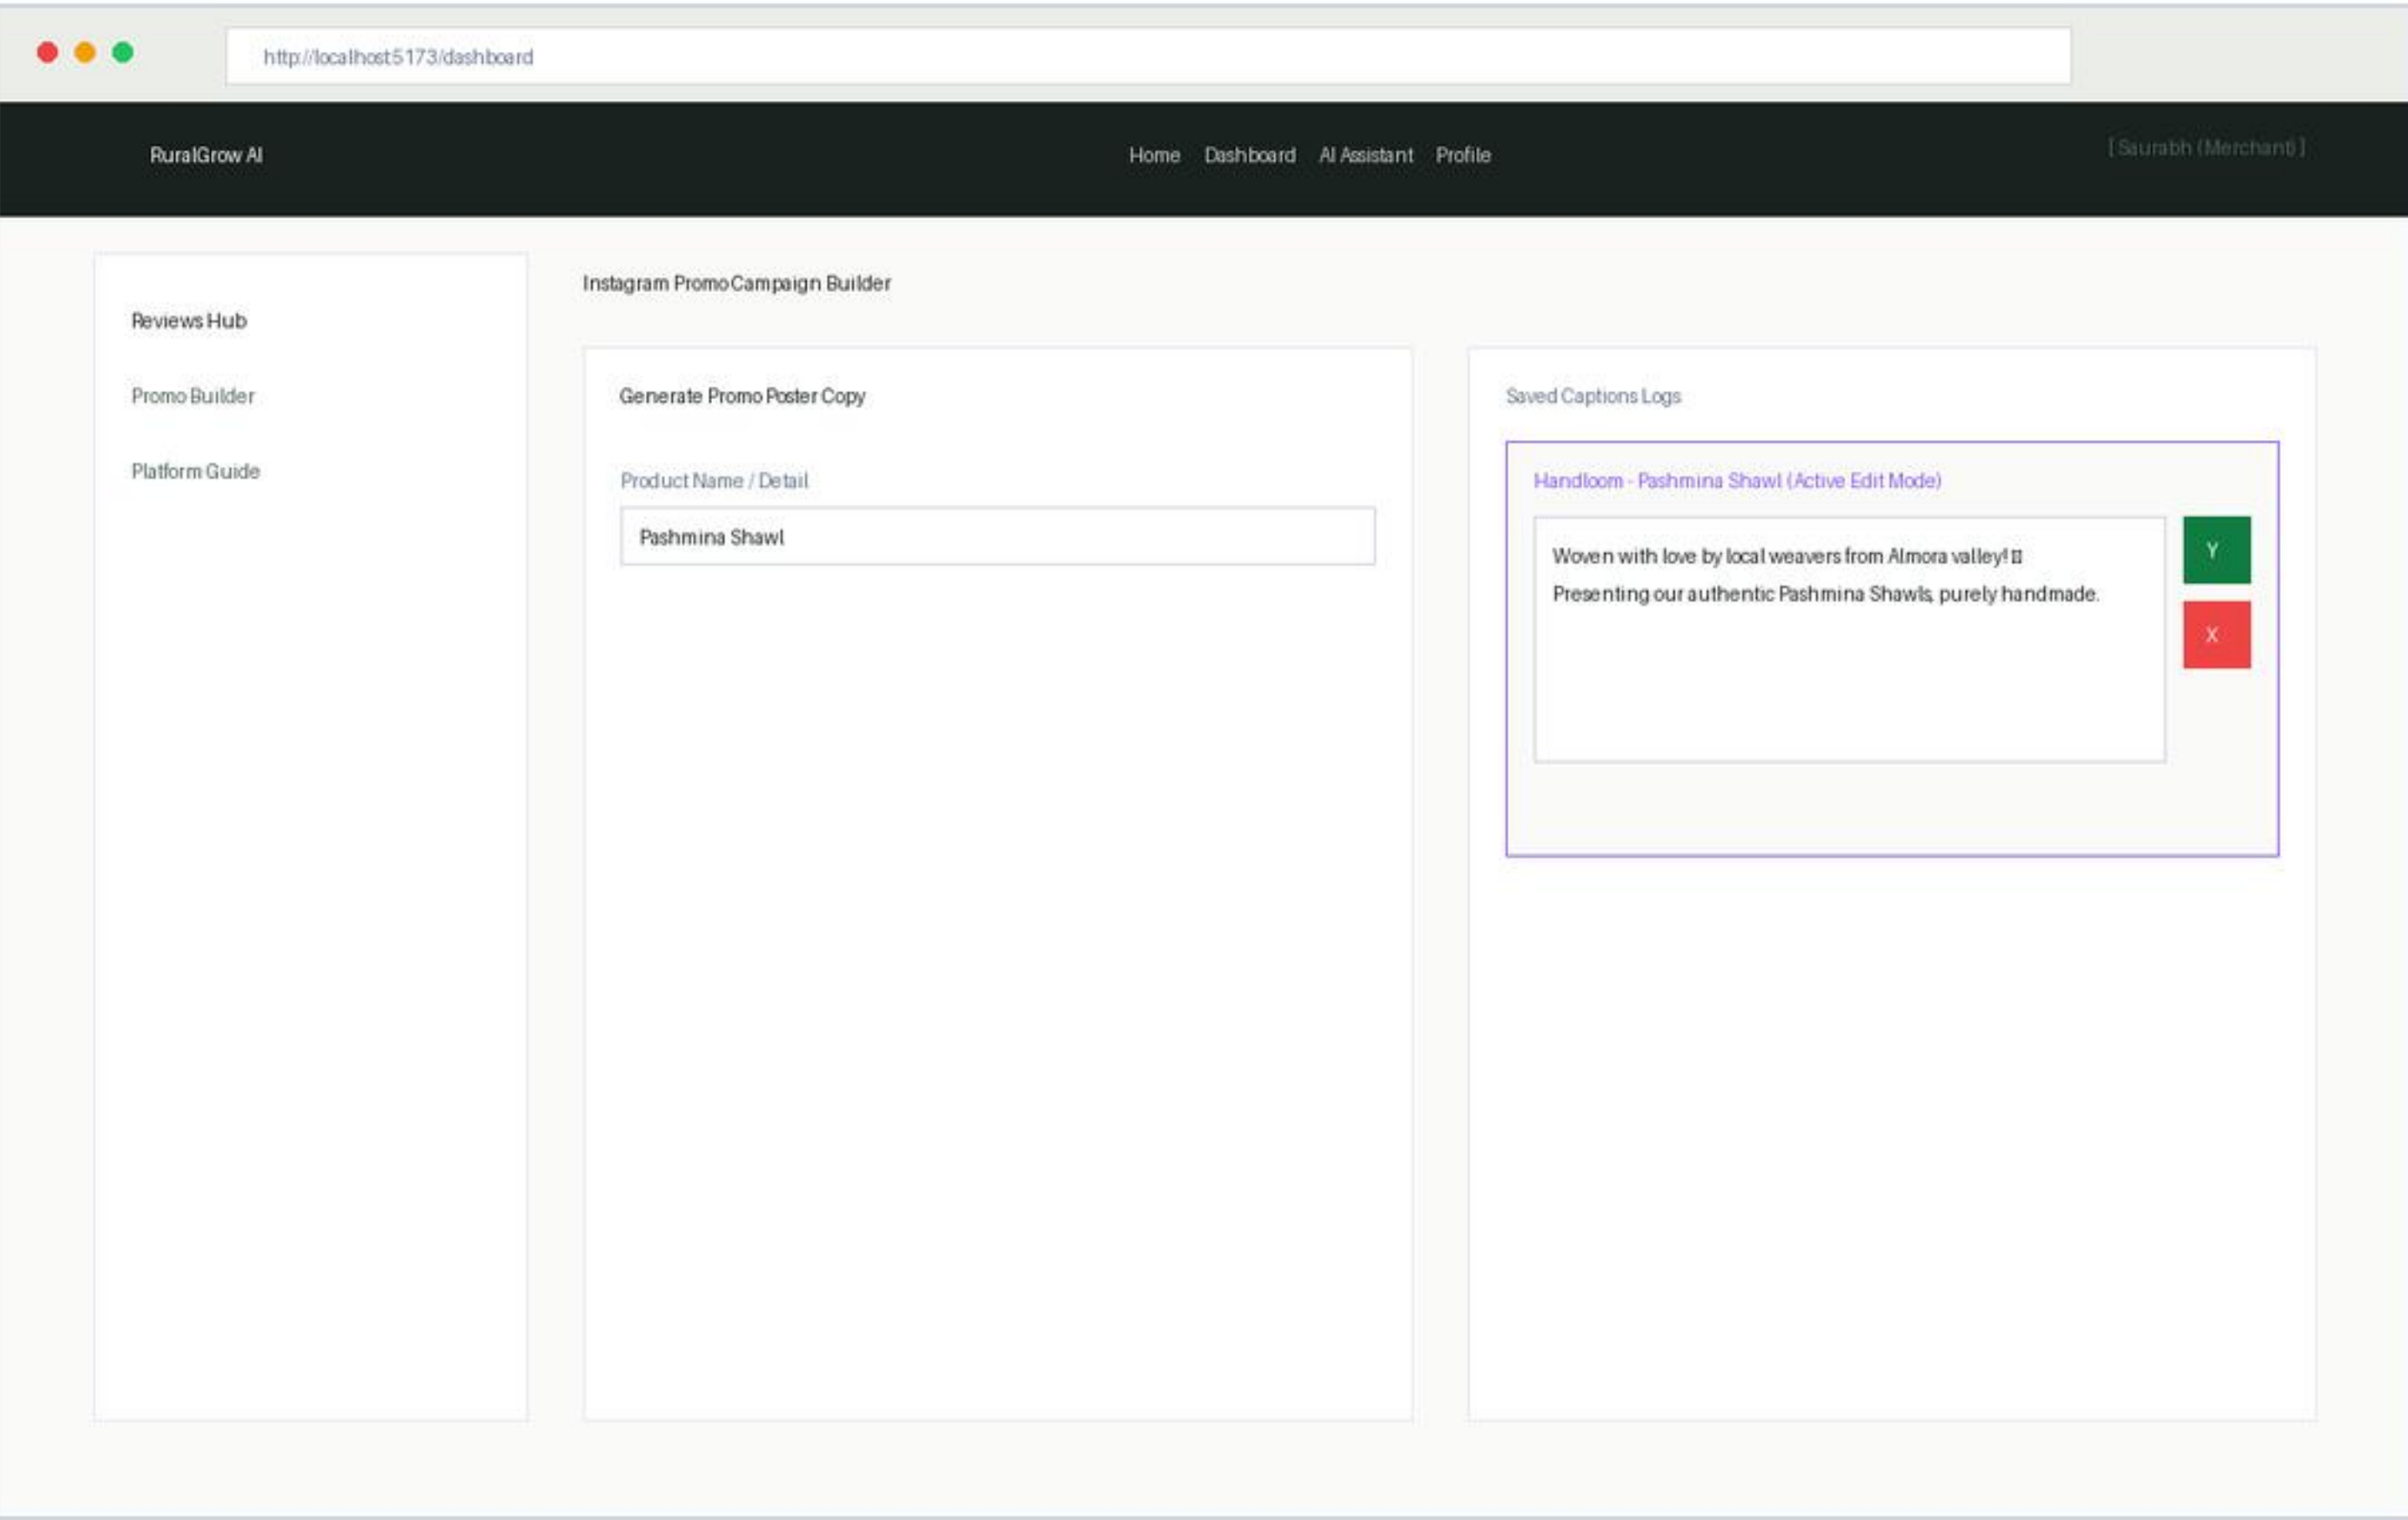

3. Suggested Reply Editing & Review Deletion (Reviews CRUD)

CAPTION NOTE:

Screen displays the active update flow for suggested review replies. Users can modify text and click 'Save Draft' (calling PUT /api/reviews/:id). Destructive actions like deletion display standard confirmation alerts.

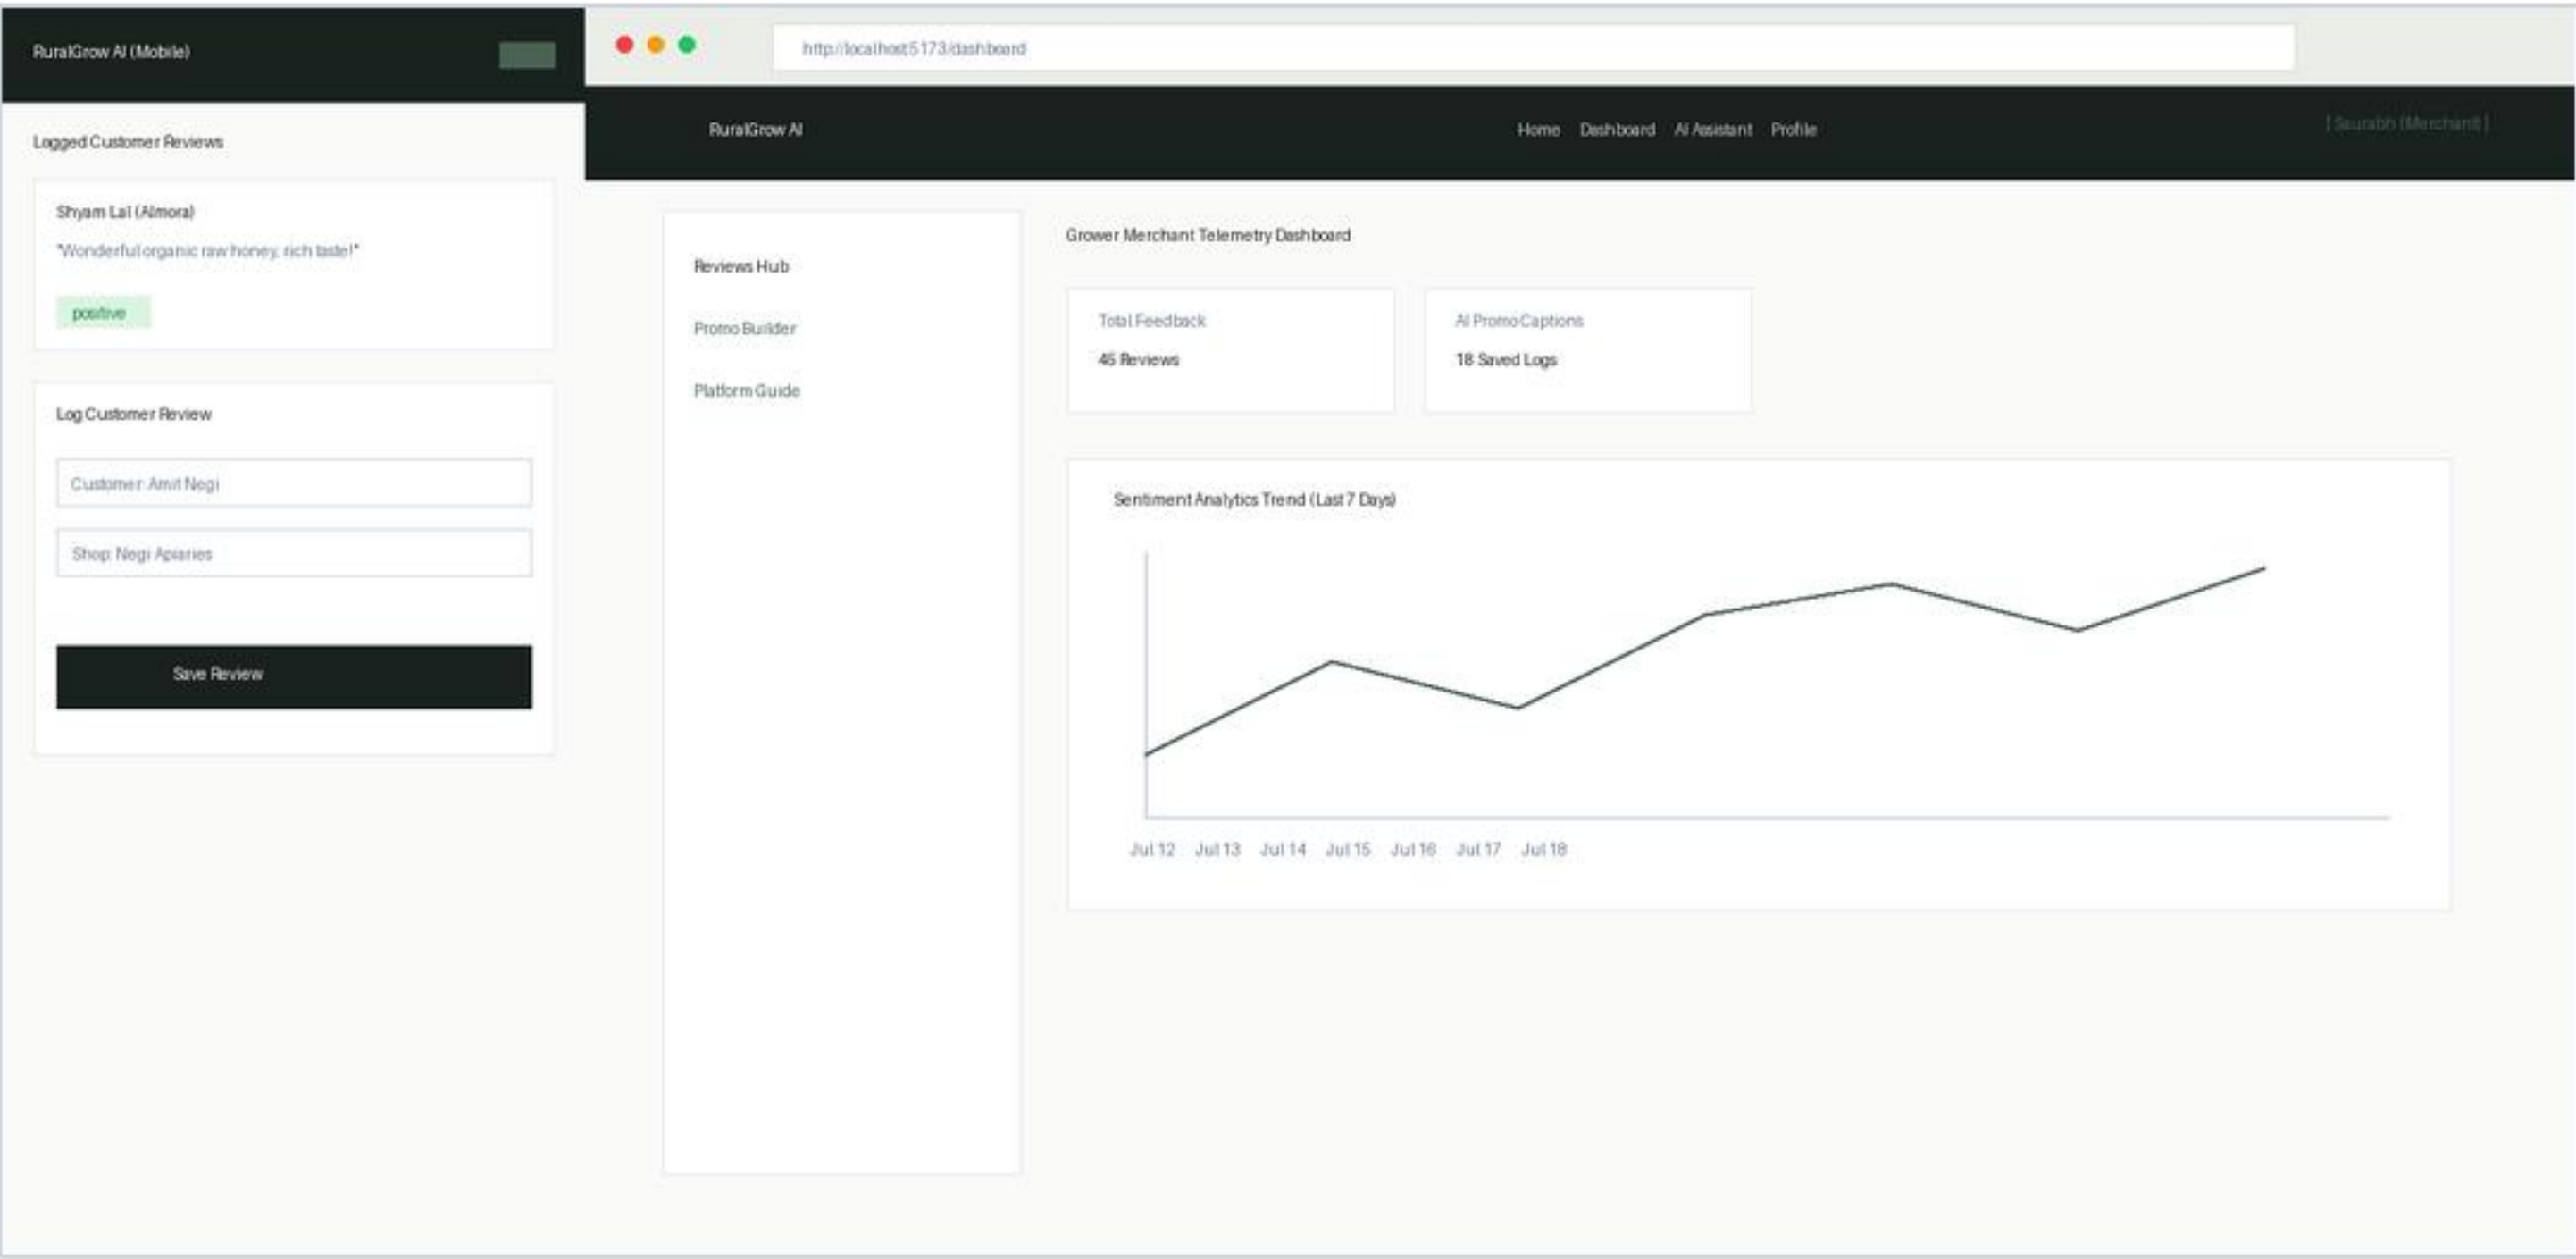

4. AI Promos Builder & Saved Caption Inline Editing (Captions CRUD)

CAPTION NOTE:

Screen demonstrates the AI Promotion builder. In the right panel, clicking edit on a saved caption card opens an inline textarea edit mode. Clicking the Check button saves changes back to the database (PUT /api/captions/:id).

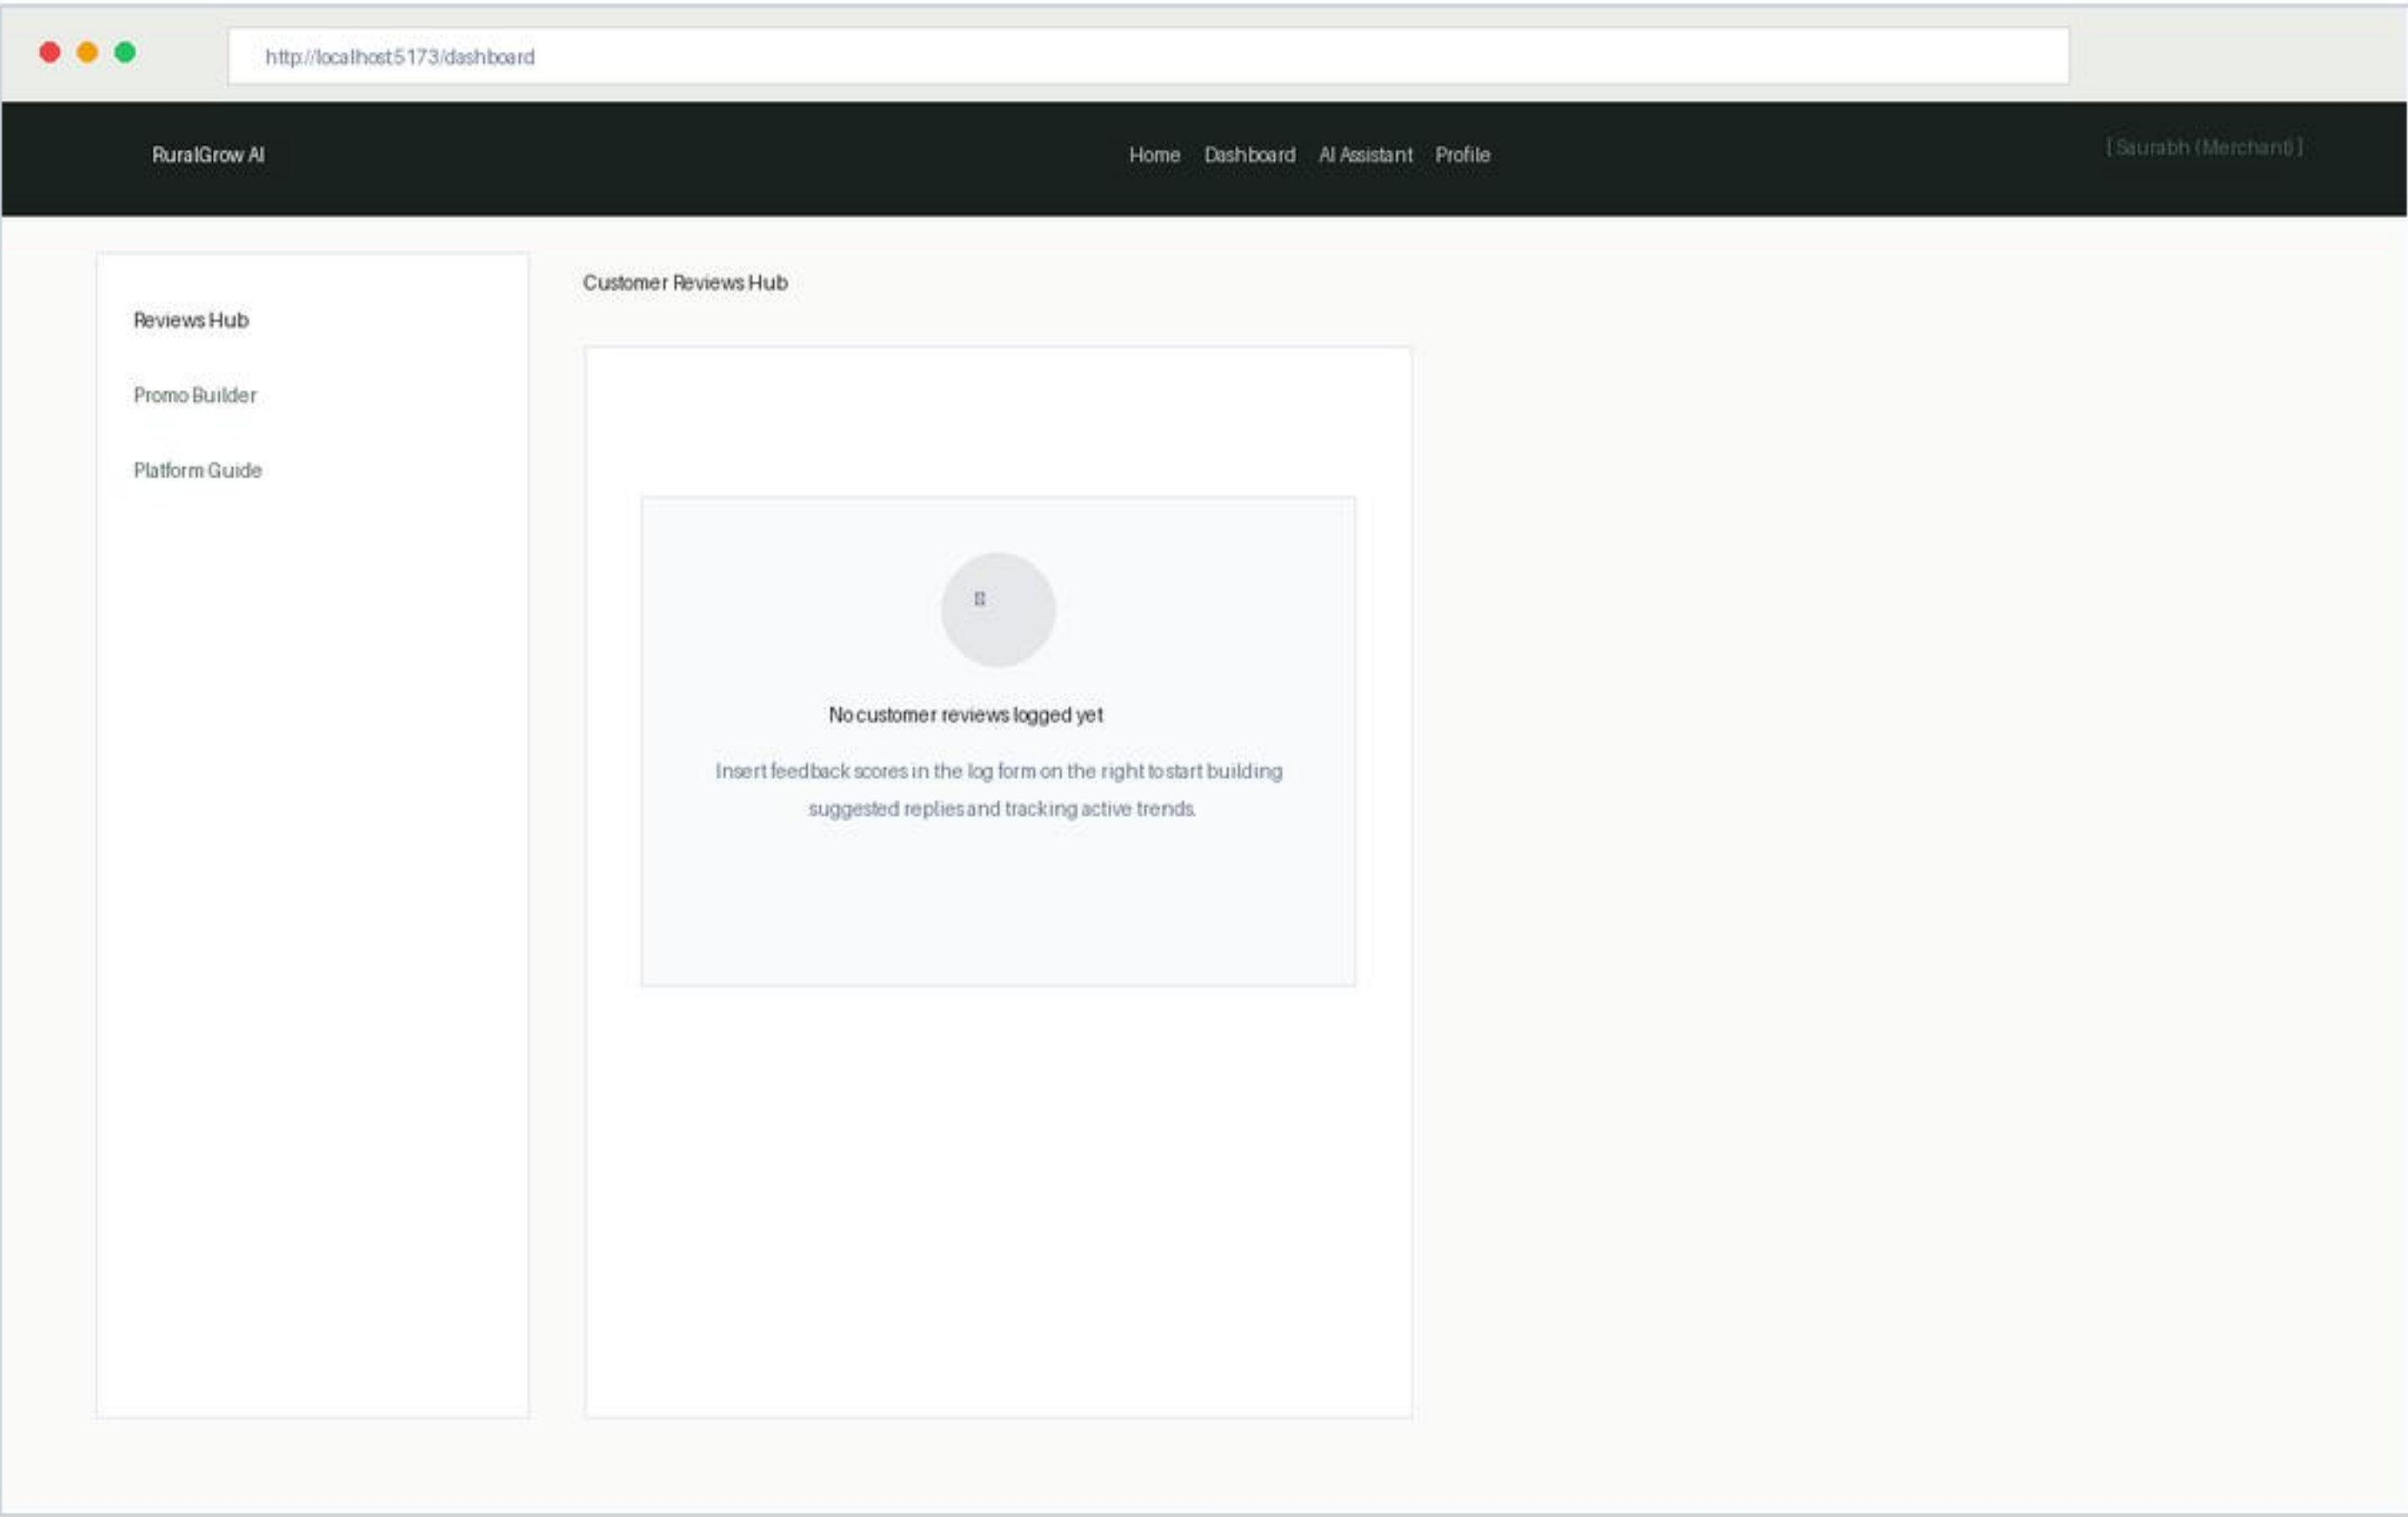

5. Responsive View Breakpoint Side-by-Side (375px Mobile vs 1440px Desktop)

CAPTION NOTE:

Visual validation of responsive layouts at mobile (375px) displaying stacked side bar components and custom sizing, contrasted next to the standard widescreen desktop grid layout at 1440px.

6. Empty State Component Design Patterns

CAPTION NOTE:

Visual display showing the custom empty state layout when the database returns an empty dataset array. Prompts users with clean onboarding icons and supportive guidance to add their first record.

7. Chrome DevTools Network Verification Logs (GET & PUT Calls)

Console Sources Network Application Performance					
Name	Status	Method	Type	Size	Time
reviews	200 OK	GET	fetch	1.8 KB	45 ms
captions	200 OK	GET	fetch	950 B	32 ms
profile	200 OK	PUT	fetch	482 B	55 ms

CAPTION NOTE:

Network tab telemetry verifying three successful API calls fired from the frontend: GET /api/reviews, GET /api/captions, and PUT /api/auth/profile, returning Status 200 OK with transaction sizes and headers.
